SUMMARY

Computer Science graduate (2026) with hands-on experience building Generative AI applications — retrieval-augmented generation pipelines and LLM-powered assistants — alongside computer vision systems. Comfortable across the stack, from data handling to model integration.

EDUCATION

B.E. in Computer Science and Engineering — Jyothy Institute of Technology, VTU, India

CGPA: 7.8 | Graduated June 2026

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Matplotlib), SQL, JavaScript, HTML/CSS

Generative AI: RAG pipeline design, LLM APIs (Claude, OpenAI), prompt engineering, vector search

ML & Computer Vision: OpenCV, MediaPipe, Scikit-learn, real-time pose estimation

Databases: MySQL

Data Tools: Power BI, Excel (Macros, Pivot Tables), Google Sheets

Tools & OS: Git, GitHub, Jupyter Notebook, Google Colab, Linux (Ubuntu)

INTERNSHIP EXPERIENCE

Machine Learning Intern — Varcons Technologies 2025

- Led a team building an AI-based wallpaper generation tool, owning technical direction from concept through delivery.
- Coordinated model integration and output pipeline, taking the project from prototype to a demoable end product.

Full Stack Development Intern — Suprmentr Feb 1 – May 15, 2026

- Built a web-based AI Quiz Generator (React, HTML, CSS, JavaScript) that turns user-provided content into dynamic quizzes.
- Developed reusable, component-based UI modules and integrated AI-generated content into the quiz workflow.
- Worked across multiple agile sprints, contributing to frontend development and feature testing in a collaborative team.

PROJECTS

PolicyPilot — RAG-Based HR Policy Assistant [Python | RAG | LLM APIs]

- Built a retrieval-augmented generation assistant that answers HR policy questions by grounding LLM responses in company policy documents, reducing reliance on manual policy lookup.
- Designed the retrieval and generation pipeline as a config-driven engine, built to be reused across different document domains rather than hardcoded to one dataset.

FundLens — SEBI & Mutual Fund Q&A Assistant [Python | RAG | LLM APIs]

- Built a RAG-based Q&A system over SEBI regulations and mutual fund documentation to answer investor questions with source-grounded responses.
- Shares its core retrieval/generation engine with PolicyPilot through the same configurable pipeline, demonstrating reusable system design over one-off scripts.

AI-Powered Fitness Posture Correction System [Python | OpenCV | MediaPipe | NumPy]

- Built a real-time computer vision system that detects body posture using live pose estimation and joint angle computation.
- Delivered instant corrective feedback via voice and on-screen cues, reducing incorrect exercise form in simulated testing.
- Designed a modular pipeline: video capture → pose detection → angle computation → posture classification.

Instagram User Analytics [Python | SQL | Power BI]

- Analyzed 10,000+ user interaction records to uncover patterns in engagement, posting frequency, and follower growth.
- Built an interactive Power BI dashboard tracking reach, likes, and comments; insights projected to improve engagement by 12–15%.
